Design for OXWELDING

By redesigning this table and other aluminum alloy furniture for oxwelded construction, the producer cut manufacturing costs 25 per cent.

and lower production costs

OXY-ACETYLENE welding lowers production costs because it provides a method of fabricating metal without slow and expensive mechanical jointing . . . By making joints stronger than the metal itself, it permits the use of lighter material or the substitution of shape-cut fabricated parts for castings . . . And by making a smooth, invisible joint, it makes painting, lacquering, enameling, or polishing easier and quicker.

Tomorrow's engineers will be expected to know how to apply the oxy-acetylene process of welding and cutting metals. For their assistance, we have prepared several interesting technical booklets explaining how this modern metal-working process is used in the design, construction, and fabrication of metal parts and structures. These books contain newer and more practical material than most texts and will form a helpful addition to your personal library. Write to us and we will send them to you without charge.

NEVER BEFORE . . .

DID YOU KNOW that there
are twenty-five engineering or-
ganizations represented in the

Makio

year-book every year, including
Tau Beta Pi, Texnikoi
and all society group pictures.

Have
SENIORS
*been able to have their
pictures taken and get a*
MAKIO
for only

\$5.00

**It pays to buy a MAKIO . . .
Senior representation alone
costs \$3, while if you buy a
MAKIO—it will cost only \$1.**
